

Python Installation Guideline

Dr. WH Tan

Browse to www.python.org

The screenshot shows the Python.org homepage. A red box labeled '1' highlights the address bar containing 'python.org'. A red box labeled '2' highlights the 'Downloads' link in the top navigation bar. A red box labeled '3' highlights the 'Windows' option in the dropdown menu under 'Downloads'. The page features the Python logo, a search bar, and a 'Donate' button. A sidebar on the left shows a code snippet. The main content area displays 'Download for Windows' for Python 3.13.0, with a note that Python 3.9+ cannot be used on Windows 7 or earlier. The footer contains the text: 'Python is a programming language that lets you work quickly and integrate systems more effectively. >>> [Learn More](#)'.

Download for Windows

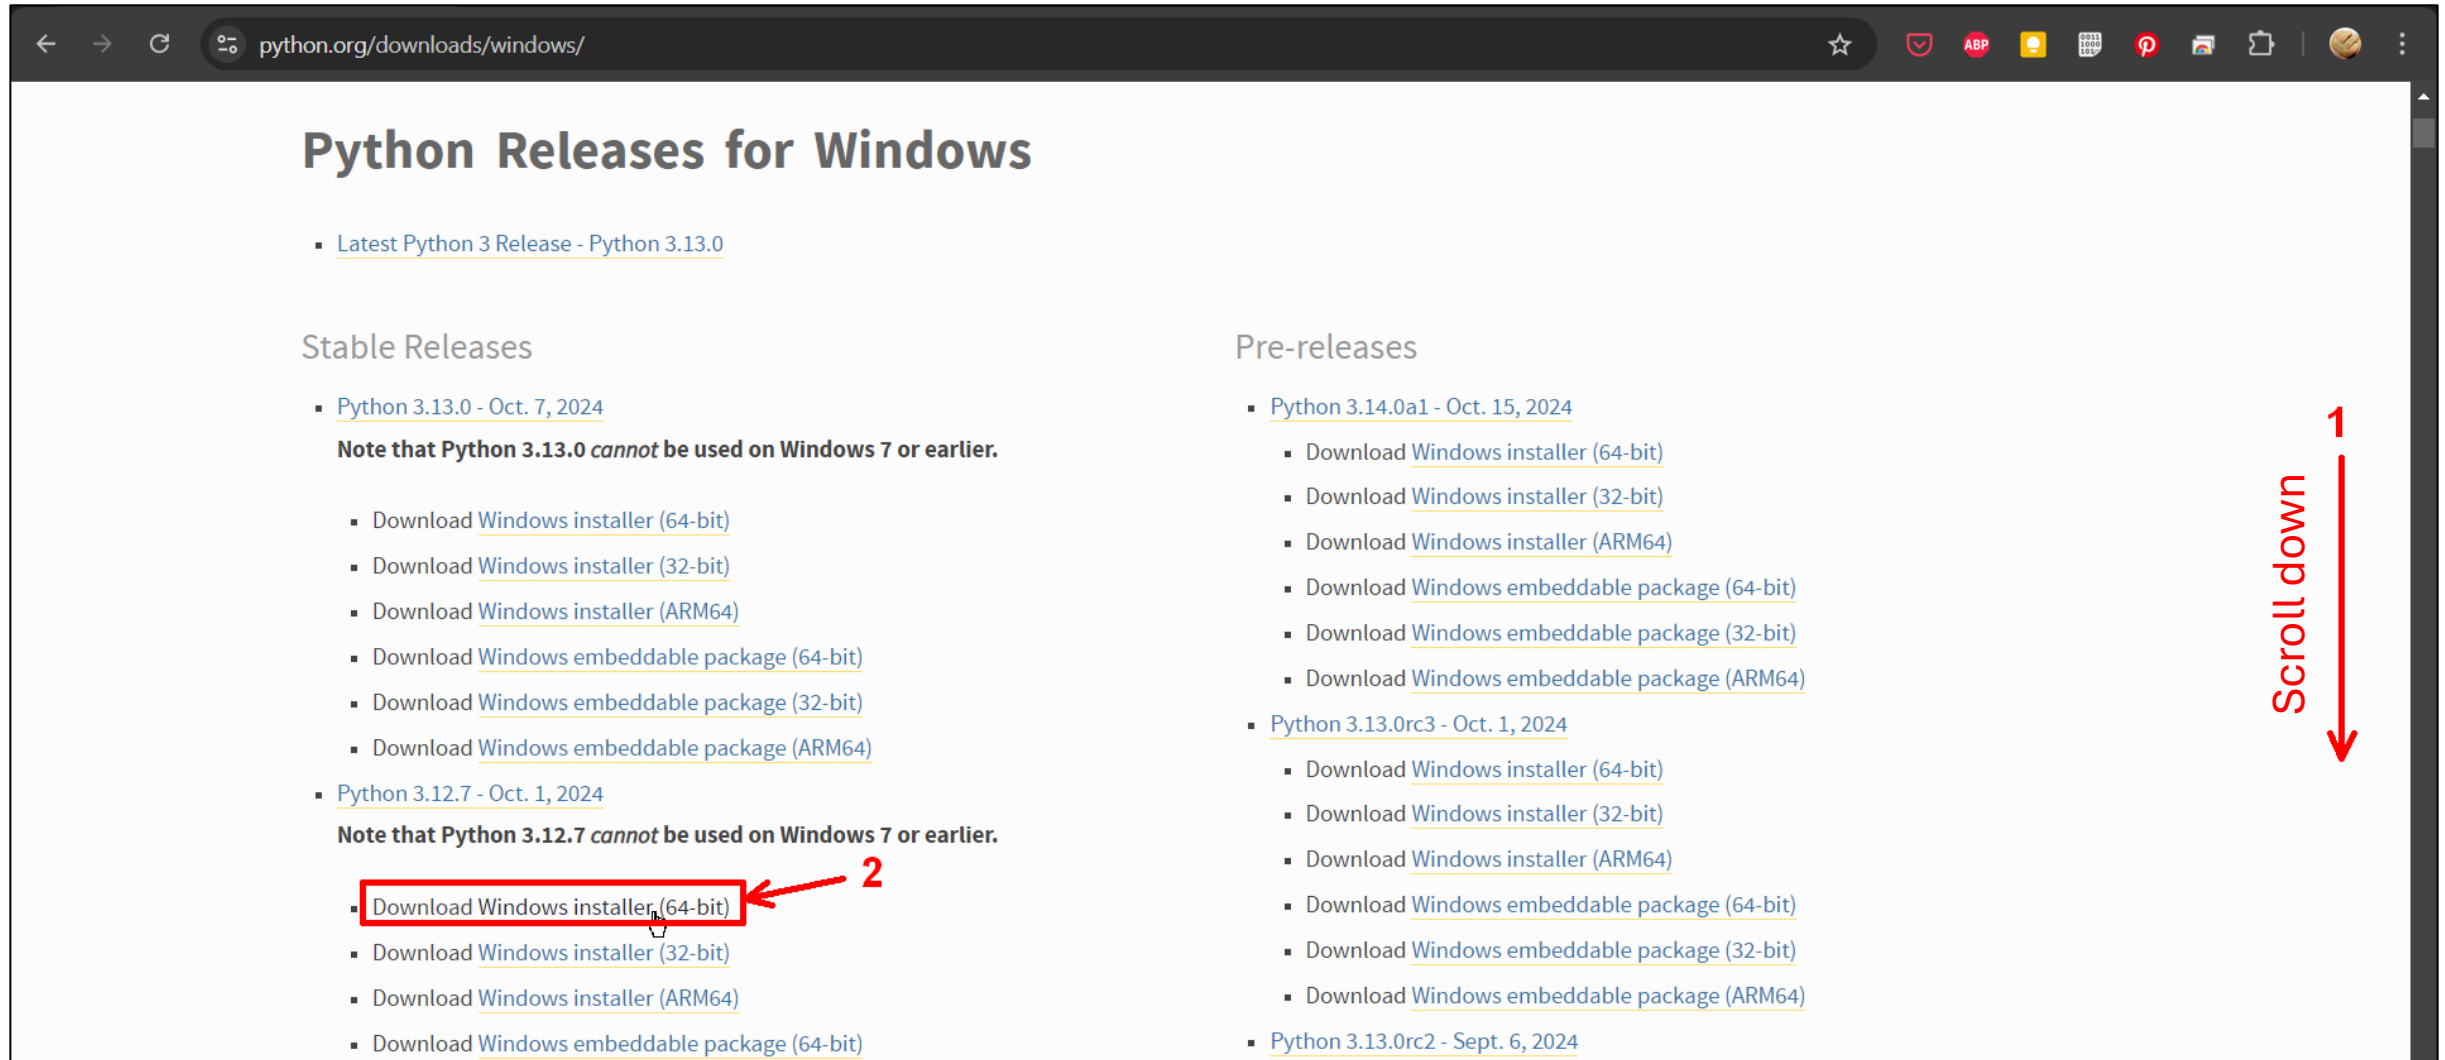

Python 3.13.0

Note that Python 3.9+ cannot be used on Windows 7 or earlier.

Not the OS you are looking for? Python can be used on many operating systems and environments. [View the full list of downloads.](#)

Python is a programming language that lets you work quickly and integrate systems more effectively. >>> [Learn More](#)

Download Python 3.12 Installer

The screenshot shows the 'Python Releases for Windows' page on python.org. The browser's address bar shows 'python.org/downloads/windows/'. The page is divided into 'Stable Releases' and 'Pre-releases' sections. In the 'Stable Releases' section, under 'Python 3.12.7 - Oct. 1, 2024', the link 'Download Windows installer (64-bit)' is highlighted with a red box and a red arrow labeled '2'. A red arrow labeled '1' points downwards on the right side of the page, indicating the scroll direction. The browser's taskbar at the bottom shows various icons, including the Start button, task view, and several application icons.

 - Download [Windows embeddable package \(ARM64\)](#)
- [Python 3.13.0rc2 - Sept. 6, 2024](#)

Launch Python Installer

Close the Installer

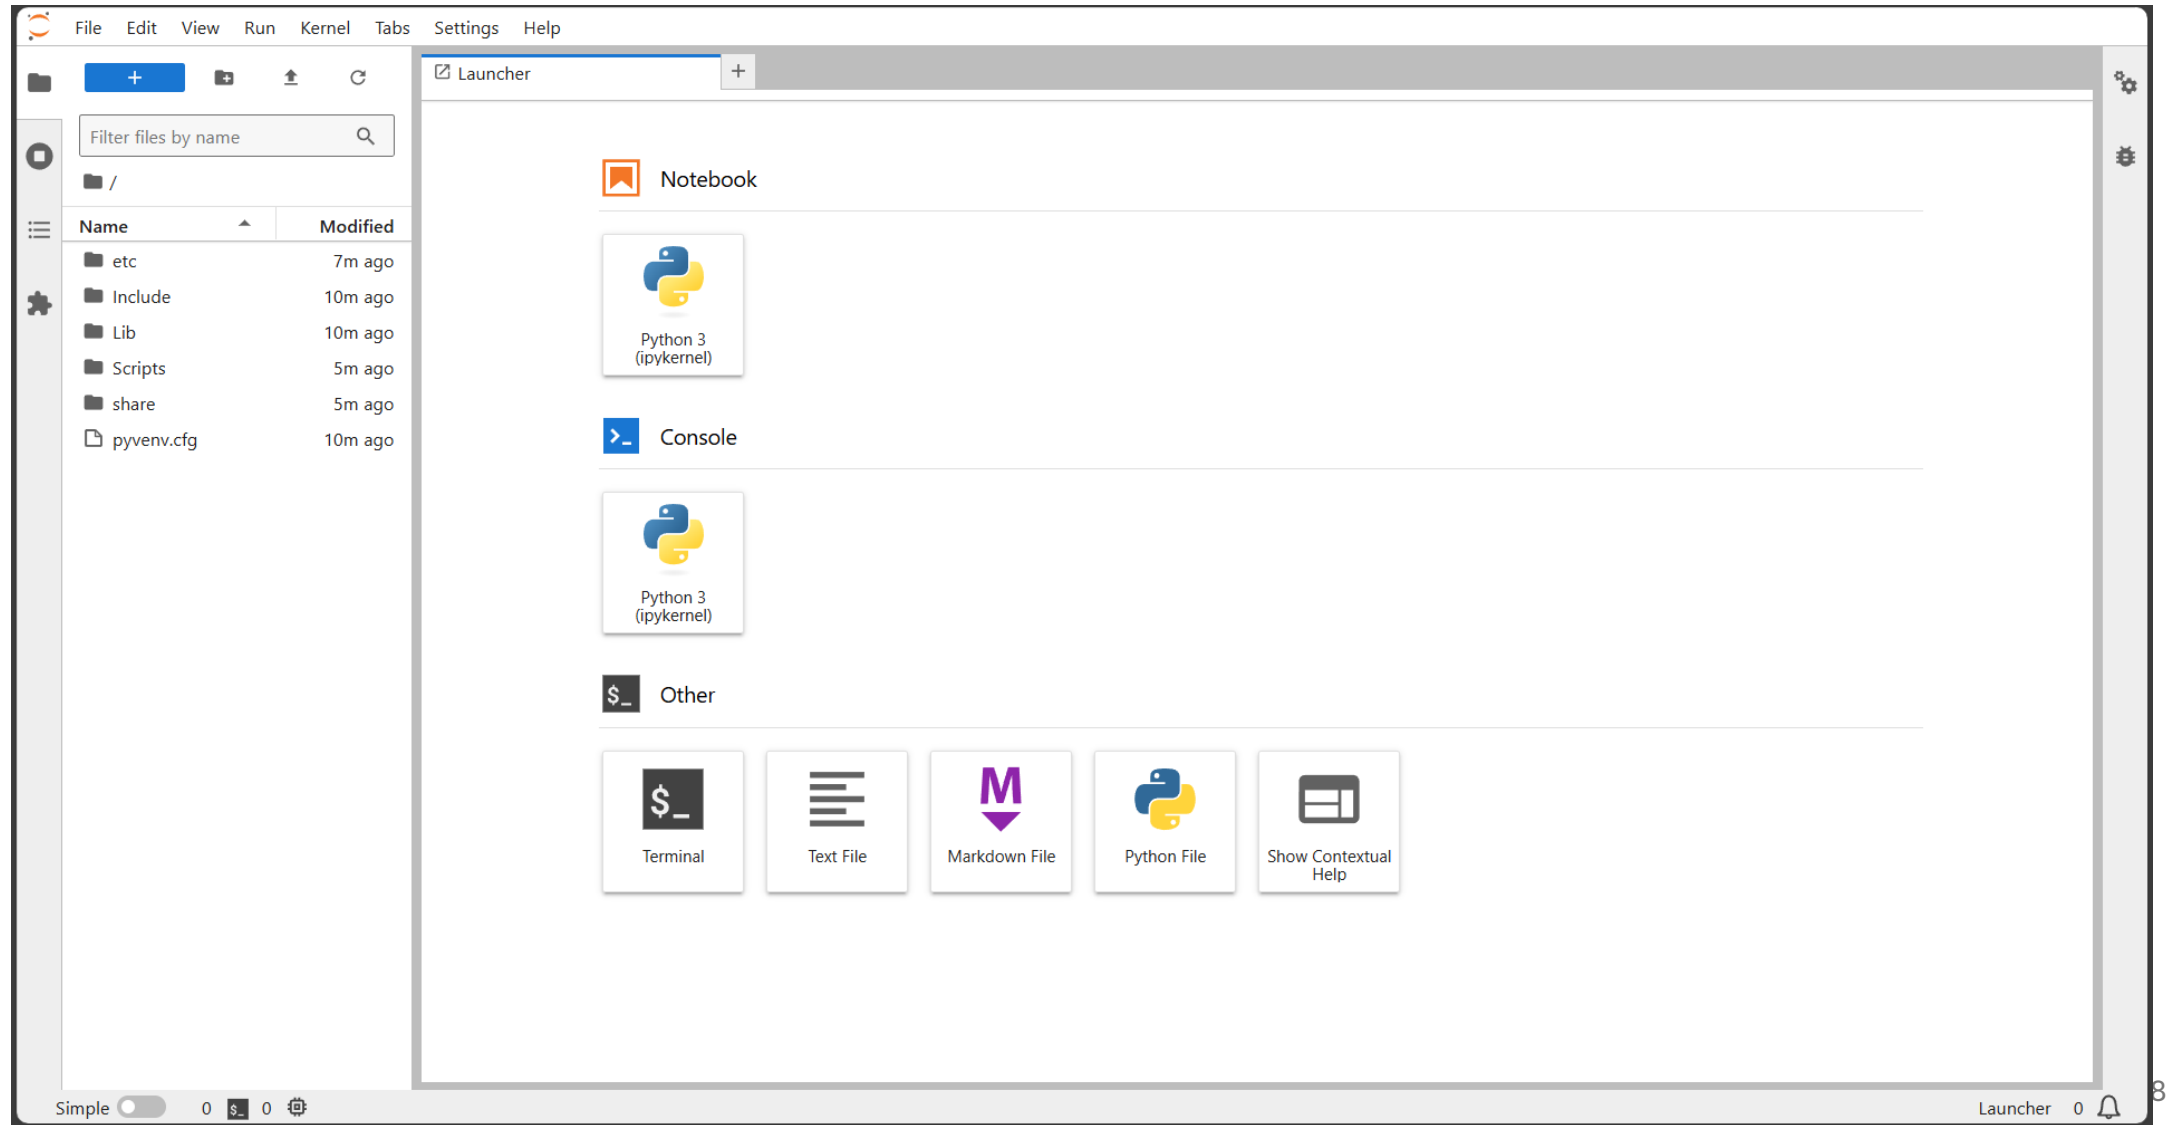

Launch Command Prompt

- Click on Windows Start Button
- Search for “cmd” (without quotes)
- Select Command Prompt to launch it
- Enter each of following commands (to create a Python’s virtual environment, activate it and install the required Python libraries):
 - `cd %homepath%`
 - `py -m venv python_venv\py4ai`
 - `python_venv\pai\scripts\activate`
 - `python -m pip install jupyter matplotlib pandas scikit-learn`

Launch Jupyter Lab

- After installing the Python libraries as described in the previous slide, simply enter the following command in the command prompt to launch Jupyter Lab:
 - `jupyter-lab`
- If the Command Prompt has been closed, reopen the Command Prompt and enter the following commands to activate the virtual environment and launch Jupyter Lab:
 - `cd %homepath%`
 - `python_venv\py4ai\scripts\activate`
 - `jupyter-lab`

Jupyter Lab

Happy programming with Python!
